

CAMU CAMU *Myrciaria dubia* Camu Camu is a bush which grows in the Amazonian rain forest of Peru. The camu camu bush produces a fruit with the same name which contains powerful phytochemicals with health benefits, including the amino acid serine, valine, and Leucine, and more VITAMINE C than any other known plant in the world. The Camu Camu fruit has a surprising range of therapeutic effects. Many people have stopped using large dosages of synthetic Vitamine C because they find that camu camu is energizing, mood-lifting and highly effective in strengthening the immune system. There's no food on the planet with a higher concentration of vitamin C than the camu camu. How high a concentration? Consider this: oranges are generally known for their high vitamin C content, however oranges often only have around 1,000 ppm of vitamin C, sometimes they can have as high as 3,000 or 4,000 ppm. The Camu Camu can have concentrations as high as 50,000 ppm or about two grams of vitamin C per 100 grams of fruit. That means that the camu camu provides 50 times more vitamin C than an orange.

The effects of camu camu on the human body are incomparable because of its food form, with bioflavonoids and other phytochemicals, clinical evidence suggests that it's far more effective milligram for milligram, than synthetic Vitamin C (ascorbic acid).

The Camu Camu fruit has a surprising range of health promoting effects. Camu Camu helps to strengthen the immune system, maintain healthy gums, eyes and skin. Camu Camu is also known as an antidepressant, anti-hepatitic, anti-mutagenic, which means it helps prevent the genetic mutation involved in the creation of cancer tumors.

Another characteristic of camu is its anti-Parkinson's quality working as a healthful nutritional tool that can either reduce the progression or potentially protect you from ever having it. The phytochemicals in camu camu are highly effective in curbing the effects of the herpes virus; in fact, on a list of plants with anti-herpetic compounds, camu camu takes the highest honors as most potent.
